# Early Summer 2017 Timetable

---

This timetable has been updated with changes made up to and including:

**April 25, 2017**

Changes are in **red**; additions are in **blue**.

---

**FULL** semester - May 3 – Aug 3 → Exam period → Aug 8 -18 includes Saturday.

**EARLY** semester - May 3 – Jun 20 → Exam period → June 22 -26 includes Saturday.

**LATE** semester - Jul 4 – Aug 21 → Exam period → Aug 23 - 25

# ADMINISTRATIVE

where

- **Instructor:** Dr. Steven Pearce

$$G(r, \theta | r_0, \theta_0) = \sum_{m=1}^{\infty} \frac{P_m^1(\cos \theta) P_m^1(\cos \theta_0)}{2m(m+1)}$$

$$\times \begin{cases} \left[ \left( \frac{r}{R_c} \right)^{2m+1} - 1 \right] \frac{r^m}{r_0^{m+1}}, & 0 \leq r < r_0 \\ \frac{r^m}{r_0^{m+1}} \left( \frac{r}{R_c} \right)^{2m+1} - \frac{r_0^m}{r_0^{m+1}}, & r_0 < r \leq R_c \end{cases}$$

$$F(r_0, \theta_0) = \left( \frac{\partial v_\phi}{\partial r_0} - \frac{v_\phi}{r_0} \right) B_r(r_0, \theta_0)$$

and

$$dr_0 = r_0^2 dr_0 d\cos \theta_0$$

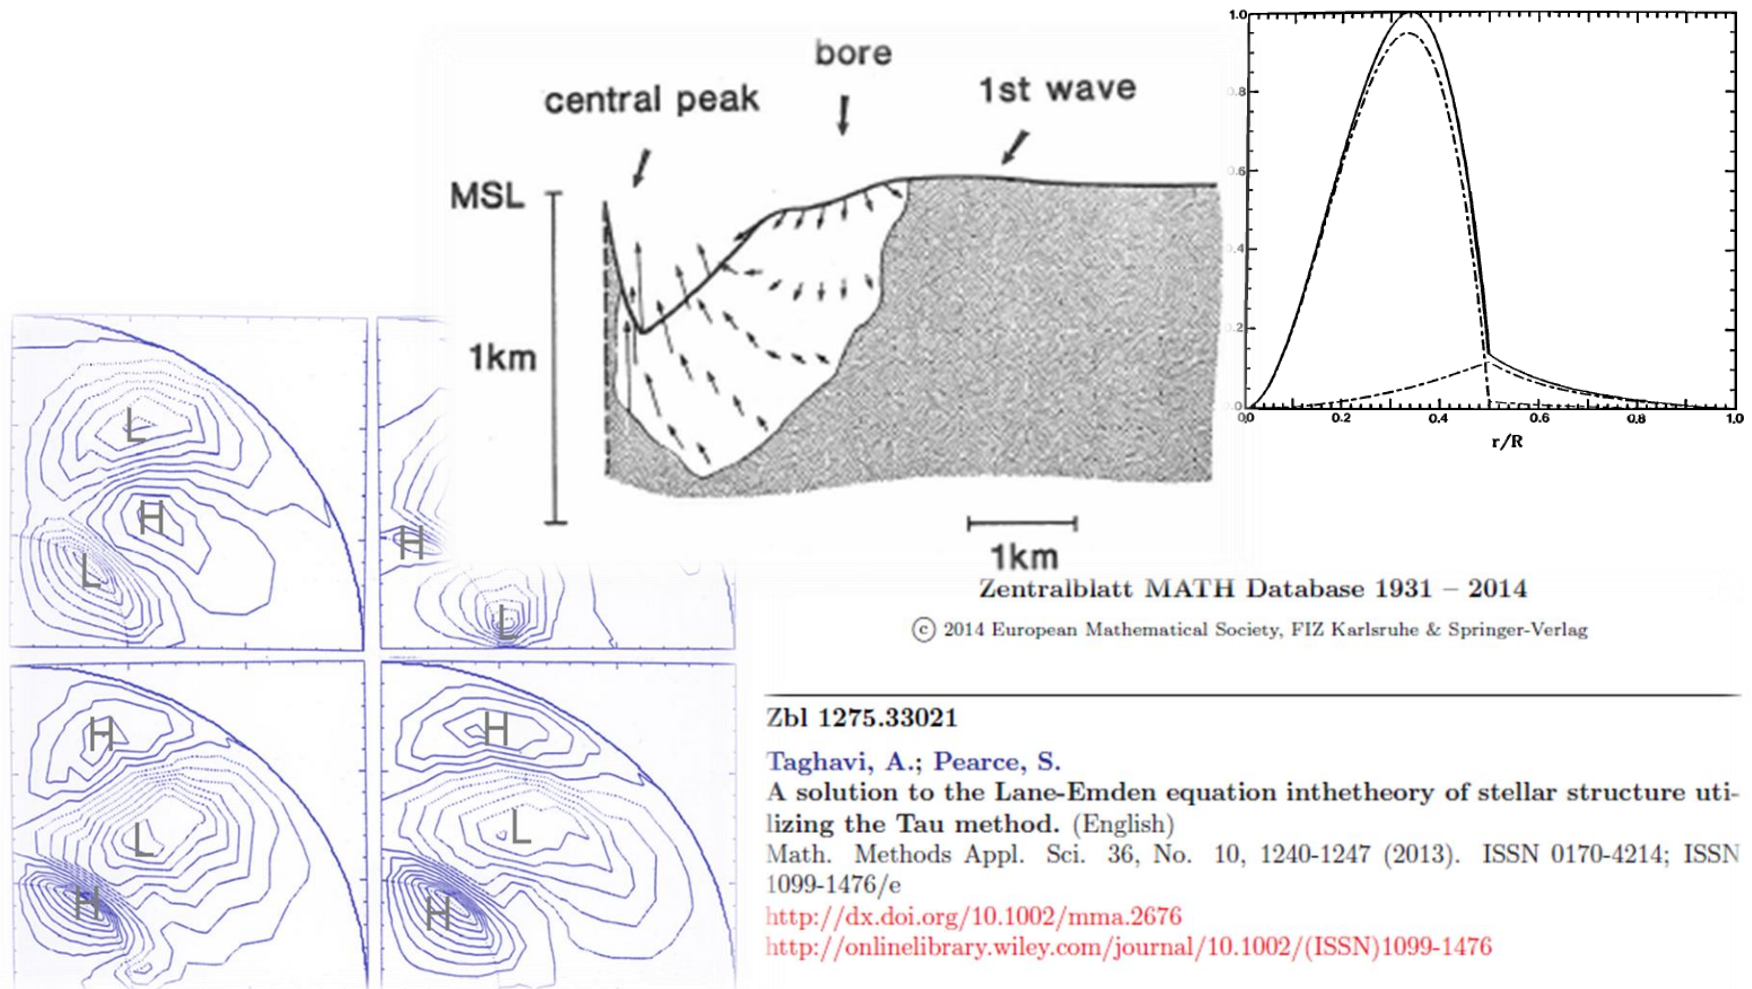

# ADMINISTRATIVE

where

- **Instructor:** Dr. Steven Pearce

- Theoretical astrophysicist and applied mathematician.
- *Faculty Member* of the SFU School of Computing Science for 18 years.
- *Graduate Advisor* for Department of Mathematics (SFU).
- Over ten years with *NASA* at the Lunar and Planetary Laboratory (Tucson, Arizona).
- Senior Exploration Geophysicist (S. J. Geophysics, BC).

# ADMINISTRATIVE

## Overview of Textbook

*Data Structures and Problem Solving Using Java* takes a practical and unique approach to data structures that separates interface from implementation. It is suitable for the second or third programming course.

This book provides a practical introduction to data structures with an emphasis on abstract thinking and problem solving, as well as the use of Java. It does this through what remains **a unique approach** that clearly separates each data structure's interface (how to use a data structure) from its implementation (how to actually program that structure). Parts I (Tour of Java), II (Algorithms and Building Blocks), and III (Applications) lay the groundwork by discussing basic concepts and tools and providing some practical examples, while Part IV (Implementations) focuses on implementation of data structures. This forces the reader to think about the functionality of the data structures *before* the hash table is implemented.

The Fourth Edition features many new updates as well as new exercises.

# Java Reference (online)

This is for those of you who require a refresher since you are assumed to be proficient Java programmers and adept at OO-programming as per the course prerequisites.

# Running Java

It is installed on UFV computers, but you can also download it from:  
<http://www.eclipse.org/neon/>

# Administrative

## Prerequisites:

**Note:** As of January 2017, the prerequisites for this course are as follows:

- COMP 125,
- COMP 155, and
- MATH 125.

# Administrative

## **Prerequisites: COMP 125 (Principles of Computing)**

- General hardware and software architecture.
- Models of computation.
- The hardware architecture.
- Data representation - data types, ASCII and UNICODE  
Binary arithmetic, ones and twos complement, floating point, hexadecimal.
- Machine arithmetic.
- Intel assembler programming.
- Boolean logic, first order logic, truth tables.
- Data transmission - encoding and framing.

# Administrative

## Prerequisites: COMP 155 (OO Programming)

- Classes and interfaces.
- Object-oriented design Inheritance: derived classes Container classes and iterators.
- Introduction to modeling.
- Coupling and Cohesion (in conjunction with control abstraction and clients/suppliers).
- Inheritance and Polymorphism.
- Containers.
- File IO.
- Recursion.
- Exception handling.
- Packages.
- Static variables and methods

# Administrative

## **Prerequisites: MATH 125 (Discrete Mathematics)**

- Set Theory Counting: a) induction b) sums and products c) permutations and combinations d) binomial theorem e) inclusion/exclusion arguments f) introduction to probability g) pigeon hole principle h) recurrence relations
- Logical Syntax/Semantics: a) informal versus formal arguments b) propositional calculus c) Boolean algebras
- Number Theory: a) modular arithmetic b) primes and composites c) linear Diophantine equation

## Summer Term (May-August 2017)

<b>May 4 &amp; 5</b>	Orientation
<b>May 8</b>	Classes start
<b>May 22</b>	Victoria Day All classes cancelled and offices closed
<b>June 6-9</b>	Convocation
<b>July 3</b>	Canada Day All classes cancelled and offices closed
<b>August 4</b>	Last day of classes
<b>August 7</b>	BC Day All classes cancelled and offices closed
<b>August 8-17</b>	Exams
<b>August 30-31</b>	Orientation

Monday

# GRADING

Homework	10%
Laboratory	20%
Midterm (TBA)	25%
Final Examination (TBA)	45%

# Tentative Course Outline

Week/ Date	Topic	Chapters	Assignment Due
<b>Week 1</b> May 1 <sup>st</sup>	Introduction and Review of Prerequisite Material	First four chapters (Part 1)	Lab 1
<b>Week 2</b> May 8 <sup>th</sup> and 10 <sup>th</sup>	Algorithms and Building Blocks (Algorithmic Analysis and Application Programming Interface in the context of Java" - "Collections API")	5 and 6	Homework 1 No Lab
<b>Week 3</b> May 15 <sup>th</sup> and 17 <sup>th</sup>	Recursion Implementing <u>ArrayList</u> and Linked Lists	7, 15 and 17	Lab 2
<b>Week 4</b> May 22 <sup>nd</sup> and 24 <sup>th</sup>	<b>MIDTERM</b> (7 <sup>th</sup> based on first 3 weeks) Stacks and Queues, Application of Stacks <b>MT: 24<sup>th</sup></b>	16 and 11	Homework 2 Lab 2 Continued
<b>Week 5</b> May 29 <sup>th</sup> and 31 <sup>st</sup>	Introduction to Trees, Binary Trees, Binary Search Trees, AVL Trees.	18 and 19	Lab 3
<b>Week 6</b> June 5 <sup>th</sup> and 7 <sup>th</sup>	Binary Heap, Priority Queues and Sorting Algorithms	21 and 8	Homework 3 Lab 3 Continued
<b>Week 7</b> June 12 <sup>th</sup> and 14 <sup>th</sup>	Hashing and Graphs	20 and 14	Lab 4
<b>Week 8</b> Monday June 20 <sup>th</sup>	Review		

# From the Course Outline

## Learning Outcomes

Upon successful completion of this course, students will be able to:

- Describe the following abstract data types:
  - Stacks
  - Lists
  - Queues
  - Arrays
  - Heaps
  - Trees
  - Dictionaries
- Implement these abstract data types in an object-oriented programming language.
- Calculate space and time complexity for commonly used algorithms.
- Identify which algorithms are appropriate for a given problem.
- Identify which data structures are appropriate for a given problem.

# From the Course Outline

## **Typical Course Content and Topics**

- Data Design & Implementation
- Abstract Data Types
- Unsorted Lists & Sorted Lists
- Stacks and Queues
- Linked Structures
- Recursion
- Binary Search Trees
- Priority Queues, Heaps, & Graphs
- Hashing
- Maps
- Efficiency of Algorithms
- Sorting & Searching

# Lectures and Labs

- Monday and Wednesday from 08:30 to 12:10 in ABD 223.
- Lectures last roughly two and-a-half hours.
- Slides will be posted after each lecture.
- Labs take up the remainder of the class period
- Breaks will be democratically determined.
- The course ends Monday, June 19<sup>th</sup> (twice the normal pace – eight hours per week).

# ACADEMIC HONESTY

## YOU CANNOT:

- Give/receive code to/from other people.
- Use Google to find solutions for assignments.

# ACADEMIC HONESTY

## YOU CANNOT:

- Give/receive code to/from other people.
- Use Google to find solutions for assignments.

## YOU CAN:

- Meet with peers to discuss assignments away from computers.
- Re-work assignments on your own.
- Assist other students in deciphering compiler error messages, providing debugging hints, *etc.*
- Use online resources to understand the concepts needed to solve an assignment.

# ACADEMIC HONESTY

**You have been warned against plagiarism:**

- **Technology has advanced to the point where plagiarism has become nearly impossible.**

# ACADEMIC HONESTY

You are warned against plagiarism:

- Technology has advanced to the point where plagiarism has become nearly impossible..
- **Please just do your work, because it is simply not worth taking the chance of being caught.**
